PART OF AXJO GROUP

Smart cable drum recycling

DRUMSTER GROUP is an impact company that operates and develops app solutions and systems for packaging returns. The company's focus area is the return of cable packaging, but wood and pallet products are also returned in the system. The app currently has over 5,000 users and together with Drumster Drivers and Drumster Partners, the company creates a complete logistics flow between users and manufacturers with the aim of creating environmental benefits.

Drumster Group AB has operations in Sweden and Finland, but has initiated cooperation in other parts of the world. In Sweden, we have a logistics center and headquarters in Gislaved, and in Finland we are active in Riihimäki outside Helsinki and Oulu in northern Finland.

The company is a subsidiary of Axjo Group AB.

”Drumster - the obvious choice  
for handling cable drums  
in wood and plastic”

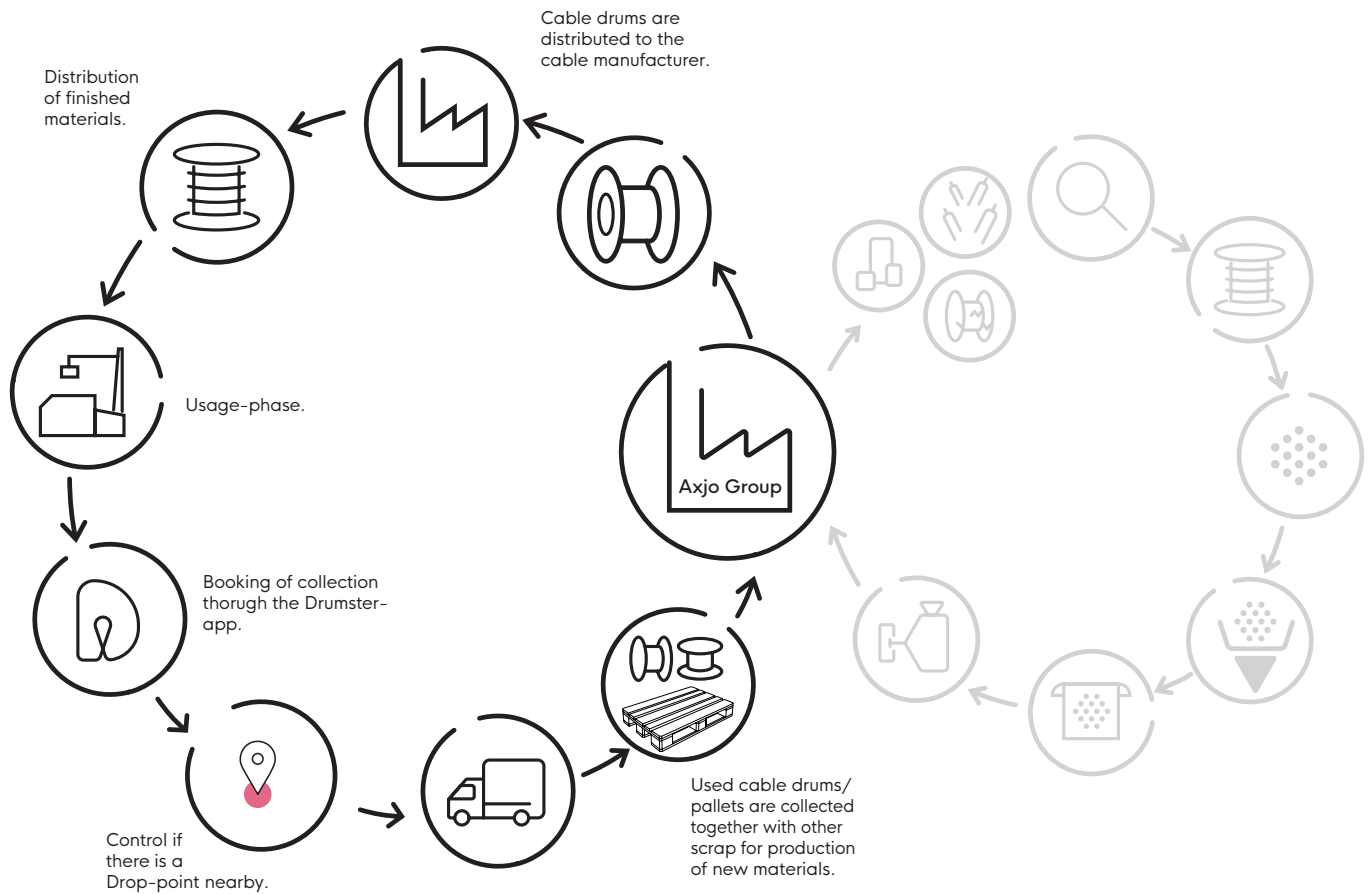

## A "CLOSED LOOP SYSTEM" WITH AXJO GROUP

Cable drums are designed and developed to be used multiple times. Cable drums in recycled plastic from Axjo Group can be used up to ten times in different circular systems. Being able to use packaging several times should be a matter of course, but this is unfortunately not the case in the installation industry.

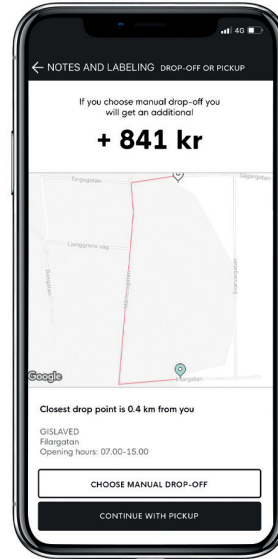

If the cable drums are damaged, we first try to repair them to extend their product life cycle. We work according to the principle - reuse first, recycle second.

Drumster Group, which is part of the Axjo Group, currently offers a widespread return system for cable drums in Scandinavia and initiatives are also underway elsewhere in the world. With the help of a smartphone and the Drumster app, booking cable drums can be easily and smoothly made with just a few keystrokes. Through the Drumster app, we collect customer information, the location of the drums and estimate the deposit for the drums. Through our carefully selected logistics partners, we pick up the drums within 2-5 working days. Alternatively, the drums can be dropped off at one of our drop-points. Once the cable drums reach our logistics center they are checked. We ensure the quality, repair any broken drums, and then send them out for use again. Cable drums that cannot or may not be repaired are recycled, both wood and plastic. Wooden cable drums are chipped and plastic cable drums are ground down and turned into new cable drums. This circular system means that less raw material is used, which has positive effects on both the environment and the economy.

## DRUMSTER APP

Choose DRUMSTER when returning empty cable drums. DRUMSTER has a very user-friendly return system where the user can book the return via the DRUMSTER app. Tell us where you are, what you want to recycle and we will pick it up. Once we have inspected the cable drums, you get the choice to get a refund or donate to charity. Smart, isn't it?

## DROP-POINTS

What is a Drop-point? Our Drop-points are located around the country for return directly by the installer. These are visible in the app in case of low quantity of drums and if you are in the vicinity (5 mile radius) of a return station.

You as a customer are responsible for labeling the drums with well-defined goods marking to identify the drums upon arrival in Gislaved. Opening hours and directions are available for each booking and can also be found under "My bookings" in the app!

EXAMPLES OF APPROVED CABLE DRUMS:

EXAMPLE OF NOT APPROVED CABLE DRUMS:

Core plank missing

Plywood/  
one-way-drums

Inner plank on  
flange missing

Painted drum

Outer plank missing  
MAX 2 planks are repairable

Not K-standard

Not K-standard
